To integrate the GLS plugin into the purchasing process of your e-shop, insert the following code into the HTML code of the webpage within the <head> section. Replace **<GLS_API_KEY>** with your own API key. The API key should be enclosed in quotation marks.

```
<!-- GLS – vlozte do <head> -->
<script type="text/javascript">
   (function (w, d, i) {
      var f = d.getElementsByTagName('script')[0], j = d.createElement('script');
      j.async = true;
      j.src = 'https://plugin.gls-slovakia.sk/v1/' + i;
      f.parentNode.insertBefore(j, f);
})(window, document, '<GLS_API_KEY>');</script> <!-- End GLS -->
```

Initialization

GLS.

After successful initialization of the GLS plugin with a valid API key, the JavaScript object **GlsWidget** will be accessible. The object has implemented **open** and **close** methods, which are used to control the plugin for selecting a pickup point.

Open method(callback, options)
The **open** method loads and opens the plugin for selecting a pickup point.

Parameters of open method

Parameter	Type	Obligatory	Description

callback	function	Yes	Return function that is executed after confirming the selection of a pickup point. The parameter of the return function is a JSON object called "point." This object contains information about the selected pickup point:
			`point = { id:`
			
			`    title:`
			`    address:`
			`    postalcode:      <string>,`
			`    isparcellocker: <bool>,`
			`    street:          <string>,`
			`    city:            <string>,`
			`    countrycode:     <string>,`
			`    oldId:           <string>,`
			`}`

options	JSON	Yes	JSON with plugin settings

Implementation

🟡

GLS.

Plugin settings. Parameter options of open method

Parameter	Type	Obligatory	Default	Description
lang	string	Yes	'sk'	Language mutation of plugin. Available: 'sk', 'en'.
renderTo	string	No	null	It allows loading and displaying the plugin within an existing DOM element. The value should be a jQuery selector for the DOM element. Example: *'#my-plugin'* for element *<div id="my-plugin"></div>*

Implementation

● GLS.

Example of the open method:

```
/ callback function onPointSelect
function onPointSelect(point)
{
console.debug('Pickup point identifier: ' + point.id);
console.debug('Selected Pickup point: ' + point.title);
console.debug('Address : ' + point.address);
console.debug('Postalcode : ' + point.postalcode);
console.debug('Parcel locker : ' + point.isparcellocker);
console.debug('Street : ' + point.street);
console.debug('City : ' + point.city);
console.debug('Country code : ' + point.countrycode);
console.debug('Pickup point old identifier (string): ' + point.oldId)
GlsWidget.close();
}

// Calling the open method with a callback function and JSON settings
GlsWidget.open(onPointSelect, {
lang: 'sk',
renderTo: '#my-plugin'
});
```

Implementation

●

GLS.

Close method()

The close method terminates the pickup point selection and closes the plugin.

Example of the close method:

GlsWidget.close();

Implementation

GLS.
